Artisan Surveying Group

VETERAN-OWNED SURVEYING BUSINESS OFFERING A VARIETY OF ENGINEERING, DESIGN, ARCHITECTURAL, GIS, VERIFICATION, & ACQUISITION NEEDS

ASG specializes in all facets of surveying, including, but not limited to:

- Construction Staking
- Construction Staking Verification
- Establish Control & Benchmarks (Geodetic)
- Utility Corridor Staking
- Utility Corridor Staking Verification
- As-Built Surveying
- Topographic Acquisition Surveying
- Photogrammetry Support
- Utility & Utility Corridor Mapping
- Deformation and Subsidence Monitoring
- Environmental Remediation Mapping
- Environmental Remediation Volumes & Mapping
- Water Rights Consulting
- Topographic Contouring & Feature Mapping
- Right of Way Acquisition Validation & Mapping
- Homeland Security GIS Assistance
- GPS Base Station Installation & Maintenance
- Spatial Measurement Systems Design & Integration
- Survey-Engineering Staff Systems Training

Founded 2008 by Timothy J. Wolf, PLS, CFedS, WRS - second generation surveyor - carrying on the tradition of late author & Professor Emeritus, Paul R. Wolf, PhD, CP, PE, PLS

Resume & References Available Upon Request

MAJOR CAPITAL IMPROVEMENT PROGRAM PROJECT HIGHLIGHTS

Solar Facility Layout

Renewable Energy Construction Projects - SEGS VIII & IX, Harper Lake, CA. ASG's founder was engaged in construction staking of parabolic trough Solar Energy Generation projects in the late '80's by LUZ Construction Management Corp. These facilities continue to transform solar renewable energy into 160 MW of peak electric resources to serve customers across the state of California - the realization of a then visionary approach to sustainable and reliable energy that continues to produce.

Facility Control

Artisan provided geodetic horizontal and vertical control for the Clark County Water Reclamation District. The work helped to interrelate historic legacy spatial building, infrastructure and underground facility locations to newer improvements. This work is not only crucial for newer project construction activities, but extends into Geographic Information Systems benefits to support call-before-you-dig initiatives, with the goal of saving resources and maximizing operator efficiency and effectiveness.

Construction Verification

Artisan provided verification, geodetic positioning and deformation monitoring of the Hoover Dam Bypass Bridge Construction Project. Our experience with bridge design plan interpretation, component fabrication, deformation monitoring and construction layout stands out. This project connects NV with AZ, traverses two valleys while being bifurcated by the mighty Colorado River - all suspended on an arch some of the columns of which rise over 1,100 feet.

Construction Control

This project engaged acquisition of four-band digital imagery mapping for RGB & Infrared. The project is part of a resource allocation and management program that involved 10,800 square miles of geodetic control and mapping across two states and eight counties preceding design and construction of a 500-mile potable waterline. The project reveals that no geodetic control project is too large for Artisan's expertise. State and federal negotiations were required.
